

SystemOne® for HME – Purchase Order Module

QS/1®'s Purchase Order module supports HME provider purchase order preparation, tracking and receiving, and enhances SystemOne's inventory management capabilities.

Advanced Capabilities

QS/1's Purchase Order module enhances SystemOne's built-in inventory management capabilities. It makes tracking inventory, calculating inventory levels and monitoring value on hand and in the field, easy and fast. If you are also using QS/1's optional HME Point-of-Sale module, the inventory is shared with SystemOne to eliminate duplicate data entry.

Manage Inventory

Stay on top of your inventory with QS/1's Purchase Order module. GTIN (formerly UPC) bar code scanning allows you to sell or rent items by simply scanning the bar code label. This module allows you to design and print up-to-date item and shelf price labels, with or without bar codes. The utilization of these item and shelf labels allows you to increase profits by eliminating incorrect pricing.

Flexible Ordering

Based upon user-defined minimum and maximum inventory levels set for each item, the system can automatically prepare vendor-specific purchase orders. You can modify these purchase orders by increasing or decreasing the suggested order quantities. You can also delete items you do not wish to order or add additional items that the computer did not suggest.

Easy Receiving

Sometimes partial orders are received. The system can track any back-ordered items or quantities until they're fulfilled. As items are received, the system automatically updates on-hand quantities and creates serialized records. All this insures accurate and current inventory levels.

Training and Support

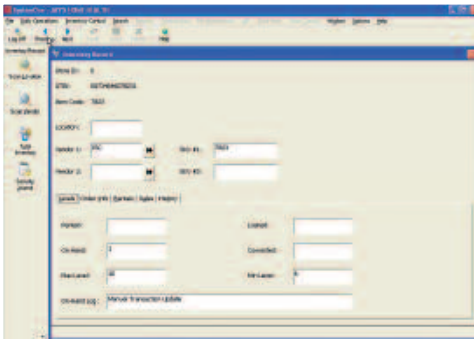

QS/1 can schedule online training to meet your needs, and SystemOne software support specialists are only a toll-free call away.

- *Automatically create purchase orders based upon inventory minimum and maximum levels*
- *Generate, print and track purchase orders by vendor*
- *Monitor items ordered and received each day*
- *Design and print item and shelf labels as needed*
- *The system automatically calculates on-hand and in-the-field quantities and values at any time*

Inventory Management

- Establish minimum and maximum inventory levels to automatically generate purchase orders
- The system automatically tracks the quantity on hand and committed
- Monitor items ordered and received each day
- Calculate on-hand and in-the-field rental inventory quantities and values at any time
- Design and print item and shelf labels with or without GTIN bar codes

Ordering

Item Code	Item Description	On-Hand	Back Order	Re-Order Pt	Needs	On Order	Acct	Total	Qty	Req D
001	ONE GEAR SHOCK	0	0	1000	00	00/000	00000	100000	00	00
002	ONE GEAR SHOCK	1	0	1000	00	00/000	00000	100000	00	00
003	ONE GEAR SHOCK	0	0	1000	00	00/000	00000	100000	00	00
004	ONE GEAR SHOCK	0	0	1000	00	00/000	00000	100000	00	00

- Recommends purchase order quantities based on current inventory and pre-set minimum quantities
- Order recommendations are sorted by vendor for easy analysis and editing
- Increase or decrease quantities suggested by the automated purchase order system
- Add or delete purchase order items as needed
- Print purchase orders by vendor

Receiving

- Receive purchase orders in part or in full
- Track any back ordered quantities
- Automatically update the quantity on hand when received
- When receiving serialized items, you are automatically asked for serial number, your asset number (if applicable) and acquisition cost. This automatically creates a serialized item record
